

- **Overview** The PinRemote[™] Williams (WPC) model has 14 users: *Operator* being the master user. Four other accounts are designed for arcade people and 8 others are friend accounts. This is the choice for arcade/barcade operators where cash / tokens are the primary payment method used. There is also a special provision for making the CPU think the coin door is open. Service key presses are ignored with door closed.
- New Unit Config. New WPC units need to be installed (see installation instructions). Once this is done you can pull up the Simblee app on your mobile device and you should see a choice for your new PinRemote[™]. The names you should see are "PinRem" and a 9 digit serial number (this number is on your circuit board too). Once you connect you will see this screen where the Operator assigns their PIN code:
- Choose a
PIN CodePIN codes are integers between 1000 and
32767 inclusive. We recommend 5 digit PIN
codes. Once you click on the black area a
keypad will come up. Press "Return" when
done.

When you are logged in as the Operator you will see a button which takes you to the Administration screen. All other users will not see this button. Press it to change the PinRemote[™] configuration. This is highlighted in YELLOW in the picture to the left. Note: To use service keys slide the *Force Coin Door Open* switch to the right.

∠ Last Status: Administer PinRemote
IRON MANSFER
Change Machine Name by tapping in box Machine Name: (9 chars Max) 00000037
Modify User's Values Credits Operator Show Volume 255 — + Yes — + Current PIN 1234 Return

Rename the Machine The machine's name can be changed from its serial number to something more meaningful like "MedMadRem". The new name is limited to 9 characters. Enter it by tapping into the machine name, using backspace to erase what is there and type out your new name and hit Enter.

The picture at the right shows the new name entered. To make this change happen, you need to click Save/Reboot at the bottom. If you don't want your edits to apply hit Cancel Edit or Return to go back to the main screen. The reboot allows you to connect to the new name you just entered.

User Roles

User Name

There are 12 other roles besides the Operator. These roles are listed here. Each role that will be used needs to have a unique PIN code assigned to it. You assume that role when you login with that PIN code. PIN codes need to be unique.

Role Description

Venue Operator Venue Employee Refund Account Friend 1 Friend 2	Arcade/Barca Arcade/Barca Service credit Friend 1 - per Friend 2	ide O ide Ei is tha ison	perator that doesn't own machines mployees t can be given when money not credited correctly "1" that can have free play credits or volume control 2
 Friend 8	 Friend 8	"	8

How to Ad<u>minister</u> Users

Shown at the right is the bottom portion of the Administration screen. The "+ / -" boxes below the three changable items are *Steppers*. You can change the value above them by using + or keys. You move between different users by using the center stepper. This capture shows the Venue Operator's values. This user has been assigned the PIN code value of "1234". You can also tap into the Credits numeric field and enter a value. The "Show Volume" stepper determines if the current user can directly use the volume buttons.

Once you change something for this user you are shown the Save and Cancel Edit buttons. Save puts the current values in the non-volitile memory and commits these values. Cancel Edit or Return discards any changes.

Volume Macro Buttons

There are 3 macro buttons in the center of the main screen that automate volume control. These are *Mute*, *Low Volume* and *High Volume*. Mute sends a controllable number of "volume down" commands to the CPU. Low Volume does a Mute macro followed by a controllable number of "volume up" commands. High Volume does a Mute followed by a separatelycontrollable number of "volume up" commands. The following section describes how to control these numbers.

Machine Name: 0 Current User: 0	00000037 Iperator	
	PLUS ENTER	
Mute	Low Volume	
High Volume	Logout	
Administer	Volume Control	

<u>Volume</u> <u>Control</u> <u>Screen</u>

The Volume Control button shown above takes you to the screen shown here.

Here you adjust how many commands are sent for each macro button. The "Mute Volume Down Count" number should be greater than or equal to the highest volume level the machine is likely to be set to for zero volume to be achieved. "Low Volume Up Count" is how many up volume commands are sent to set the low volume level. "High Volume Up Count" is normally a larger number than the low level to limit how loud the machine can be turned up. You can tap on the number or use the steppers to change values, then you will see the *Save* button appear.

<u>Friend</u> <u>Account</u> Operation

Friend accounts provide a way for operators to offer quantities of games that someone can play in the future. Friends access their games by loading the free "Simblee for Mobile" app on their mobile device and using their PIN code to login to the PinRemoteTM for the machine they bought their credits for. The screen at the right shows user *Friend 1* being given 7 credits with a PIN of 23456 and no volume control. These credits are retained over power cycles.

If a friend account doesn't have a smart phone then venue personnel should be able to award credits using their PIN code using the house smart device.

Awarding Friend Credits

Once the Friend 1 user has logged in they will see the screen shown here. Their 7 credits are shown as entered by the Operator from the previous Administration screen.

Using the Award Credit button they can add machine service credits until the count goes to zero. This also keeps the income accounting correct.

The Force Coin Door Switch is shown in the ON position here. The Coin Door Status line below that shows the actual position of the door. If the door status isn't being overridden then this tracks what the door is doing. If the door override is active it always shows Open.
